Smartvel

Customer

1. Services contracted confirmation

Smartvel

Customer

Day1

2. Customer account set up

Smartvel will do the set up of the account: generating the API key and config.

Customer should send Smartvel their stylesheet/brand book to adapt the widget's CSS styles to the look and feel of the client.

Smartvel

Customer

Day2

3. Kick off meeting

Review the onboarding process. Identify responsible people in Customer and Smartvel and discuss implementation details and potential queries.

Smartvel

Customer

Day2

4. Confirmation & implementation details

Confirm where Customer plans to implement the solutions, which sites within their website. Visibility & accessibility. How they will communicate or redirect customers to the solution, etc.

Customer

Day3

5. Smartvel widget integration

We estimate a one-week integration process, which includes understanding technical documents, determining widget placement, and performing the integration within the Customer's website and/or app.

Customer

Day3

6. Technical Documentation

Smartvel will send the technical documentation and API key after the Kick off meeting for the client to implement the solution on QA environment within their website.

Smartvel

Day5

7. QA access for integration review

Smartvel will need access to the Customer's QA environment, to review functionalities and styles before going live.

Smartvel

Customer

Day6

8. Integration review

Smartvel will review the integration within Customer website. During these days, the client and Smartvel teams will provide feedback before going live.

Smartvel

Day10

9. Go live

After confirmation of final ok from Smartvel and Customer.

Smartvel

Customer

Day2

4. Confirmation & implementation details

Confirm Customer's plans to implement the solutions, which sites within their website. Visibility & accessibility. How they will communicate or redirect customers to the solution, etc.

Customer

Day5

5. Smartvel API integration

Depending on the Customer's backlog priorities, the development will take between 1 to 3 months. Smartvel will give support for the understanding of the technical documentation, how to make the API calls and how to design the solutions for an optimal result. The first weeks both teams will have 1-2 meetings per week in which Smartvel team will advise on best practices and will review the development.
